

Dyslexia, Dyscalculia and Irlen Syndrome® Screening

As part of our growing holistic approach, the ADHD Foundation Neurodiversity Charity is delighted to announce the launch of the new pre-diagnostic screening clinic for Dyslexia, Dyscalculia and Irlen Syndrome®. **Prices start from £65.**

Our offer:

► Dyslexia Pre-Diagnostic Screen

The Dyslexia screener provides a detailed profile of the client's literacy, processing, and memory skills. This individual diagnostic assessment provides a profile of strengths and weaknesses, helping to identify specific areas of difficulty in literacy learning. This knowledge can then be translated directly into an appropriate individual teaching plan.

► Dyscalculia Pre-Diagnostic Screen

The Dyscalculia screener distinguishes between those who have poor maths ability and those with dyscalculic tendencies, providing accurate and reliable outcomes with British Dyslexia Association Assured status. Strengths and weaknesses will be highlighted, with Standard Age Scores provided as well as recommendations for further assessment.

► Irlen Syndrome® Screening

The Irlen Method is non-invasive technology that uses coloured overlays and filters to improve the brain's ability to process visual information. The screener identifies symptoms and determines how those symptoms may be impacting upon daily life. The foundation's Irlen® Screener is trained to determine whether an individual has a profile consistent with Irlen Syndrome or not and advise accordingly.
