The ADHD Child Evaluation [ACE] and ACE+ for young people and adults

Here at the ADHD Foundation Neurodiversity Charity, when assessing ADHD in children, young people and adults, our tools of choice are the ADHD Child Evaluation, second version, [ACEv.2] and ACE+v.2. Developed by Professor Susan Young, an internationally recognized expert in the field, these semi-structured clinical diagnostic interviews aim to support healthcare practitioners and allied professionals in the ADHD assessment and diagnostic process. They are currently translated into 22 languages and used extensively in the NHS, public and private sectors across the world. The standardization of the assessment process provides quality assurance that has been recognized by The CPD Certification Service as conforming to Continuing Professional Development principles.

Learn more about the work, development and applied use of ACEv.2 and ACE+v.2 in a podcast interview with Professor Young at:
